Access Control: From Start through Design

The term “access control” can include solutions that range from mechanical keys and locks to electronic security systems. Determining the best solution for your clients requires an understanding of their wants, needs, and the products that are available today.

In this one-hour course, we'll discuss how to select the proper components to solve your clients' security issues, meet their life safety needs, and fulfill code requirements.

Key Learning Objectives

- Identify the codes that determine your choices in access control components
- Ask appropriate questions to define the customers' security, access control, and life safety needs
- Understand functions available in access control software and components and how they meet accessibility and life safety codes
- Describe and write descriptions of operations for access control systems so that all products meet required codes and system needs
